Whether you are towing a big trailer or have some rugged remote areas to travel these Long Ranger tanks give the user an option to have either maximum fuel capacity on-board or maximum ground clearance. With a huge boost in fuel capacity thanks to an 75% increase and only 20mm lower than the standard 80L tank, Our 140L model allows the largest possible fuel capacity while retaining the standard ramp over angles which do not adversely affect off road performance. The 122L model increases the capacity by 52% yet manages to improve the ground clearance by finishing flush with the chassis rails.
